Cinegy Title 26.2 Release 1

Cinegy Title Release: 26.2 R1
Cinegy Title Build: 26.2.669.237
Cinegy Title Engine Build: 1.5.0.970
Cinegy Cinecoder Version: 4.16.10.16550
Cinegy ML Version: 9.1.5871.18355
Compatible with: Cinegy Desktop 25.3+
Compatible with: Cinegy Air 24.11+
Release Date: March 26, 2026

We do not recommend using Remote Desktop Protocol (RDP) to work with Cinegy Title Editor due to some protocol limitations related to GPU acceleration.

Major Improvements & Fixes

- enhanced media availability checks and improved user feedback (US 7646)
- improved performance when processing heavy templates (US 7698)
- updated the main application window caption for better clarity (US 7626)
- enhanced the context menu for inserting images into a Text object (US 7655)
- added loop markers and an "Exit" button to the template preview window for easier management and preview of looped content directly in the editor (US 7552)
- removed insertion of macros from the "Edit" context menu in Cinegy Title Editor, launched from Cinegy Desktop (US 7657)
- implemented a smart text box for the string variables in Cinegy Title Editor, launched from Cinegy Desktop (US 7383)
- implemented default selection of the root node when a template is reopened (defect 17507)
- improved interaction with Cinegy Archive when CAS Server is unavailable (defect 17452)
- fixed an issue where not all objects were displayed on the timeline when the "Show all objects" option was enabled (defect 17544)
- fixed an issue where the last used folder path was reset when using the "Insert image" command in a Text object (defect 17578)
- fixed an application crash triggered by repeated error messages when creating a new scene or opening a scene with previously created graphics (defect 17585, ticket UAZ-836-37019)
- fixed an issue where characters were deleted or extra characters appeared when changing the image size in the "Edit text" window (defect 17577)

Upgrade Notes

- Before the installation, it is required to manually uninstall all Cinegy Titler components that you may have on your machine if the currently installed version is 21.2 or earlier.

Important Known Issues

- A memory leak occurs when opening a Title template using the "Open" or "Recent" command (defect 17510).
- The functionality of the "Run" option for plates is currently in the beta stage. Please be aware that there may be issues with functionality in this release; previous functionality is unaffected.
- Colors in semi-transparent areas within the media file used in the Cinegy Title template are displayed incorrectly if the color specified in the "Source Matted With Color" parameter is not black. The issue occurs for the Straight and Premultiplied rendering modes when previewing secondary events (Cinegy CG preview in the "Load Template" window, Clip viewer preview) and Sequences (Cinegy Title template as a main item) output. We recommend generating media files with Premultiplied alpha using the black background and not changing the black color in the "Source Matted With Color" parameter in the Cinegy Title template.
