Major Improvements 2
Known Issues and Limitations 2

Cinegize is an encrypted software-only KVM solution for remotely viewing or accessing computers over an existing LAN infrastructure, providing the highest quality and lowest-latency access possible.

Cinegize is currently in development and is being offered free of charge. Visit the official Cinegize website to explore its key features and download the latest version.

Cinegize versions released before January 2026 will no longer be supported and may stop working.

Cinegize 26

Cinegize Release: 26
Cinegize Build: 26.1.374.36127
Cinegy Cinecoder Version: 4.24.6.11350
Cinegy ML Version: 9.0.61110.3130
Release Date: February 5, 2026

Major Improvements

- implemented host display screen casting via MPEG-TS (SRT/RTP/UDP)
- fixed D2 decoding on Intel GPUs
- updated random access point detection for encoded data
- added "randomAccessFlag" to the media transport protocol

Known Issues and Limitations

- Currently, only one client can connect to the host machine.
