Cinegy Title 24.11 Release 2

Cinegy Title Release: 24.11 R2
Cinegy Title Build: 24.11.540.29782
Cinegy Title Engine Build: 1.5.0.963
Cinegy Cinecoder Version: 4.14.21.2983
Cinegy ML Version: 9.0.65172.28227
Compatible with: Cinegy Desktop 25.3+
Compatible with: Cinegy Air 24.11
Release Date: August 14, 2025

We do not recommend using Remote Desktop Protocol (RDP) to work with Cinegy Title Editor due to some protocol limitations related to GPU acceleration.

Major Improvements & Fixes

- introduced the ability to cancel the media checking when network path processing takes too time (US 7479)
- updated C++ redistributable X64 package in the installation wizard (US 7692)
- fixed issue where canceling color selection on the canvas without applying it in eyedropper mode caused both the "Selected Color" cell and the object color on the canvas to revert to the initial color instead of the last picked color from the palette (defect 17068)
- fixed Cinegy Title Editor application crash after deleting a variable on the "Variables" tab if the variable was used in an object's text field as `${File}` more than once (defect 17145)
- fixed incorrect application behavior starting Cinegy Title Editor if it has been minimized and closed from the taskbar before (defect 17257)
- fixed undoing of the color selection in the "Select color" window after canceling the eyedropper mode (defect 17399)
- introduced minor UI improvements (defects 17344, 17396)

Upgrade Notes

- Before the installation it is required to manually uninstall all Cinegy Titler components that you may have on your machine if the currently installed version is 21.2 or lower.

Important Known Issues

- The functionality of the "Run" option for plates is currently in the beta stage. Please be aware there may be issues with functionality in this release, previous functionality is unaffected.
- Colors in semi-transparent areas within the media file used in the Cinegy Title template are displayed incorrectly if the color specified in the "Source Matted With Color" parameter is not black. The issue occurs for the Straight and Premultiplied rendering modes when previewing secondary events (Cinegy CG preview in the "Load Template" window, Clip viewer preview) and Sequences (Cinegy Title template as a main item) output. We recommend generating media files with Premultiplied alpha using the black background and do not change the black color in the "Source Matted With Color" parameter in the Cinegy Title template.

Cinegy Title 24.11 Release 1

Cinegy Title Release: 24.11 R1

Cinegy Title Build: 24.11.528.16046

Cinegy Title Engine Build: 1.5.0.963

Compatible with: Cinegy Air 24.11

Release Date: November 28, 2024

We do not recommend using Remote Desktop Protocol (RDP) to work with Cinegy Title Editor due to some protocol limitations related to GPU acceleration.

Major Improvements & Fixes

- introduced a color picker tool in the color selection dialog (US 7502)
- introduced the exit loop button and loop markers in the template preview (US 7552)
- improved variable iconography (US 7565)
- fixed incorrect display of images in the "Text" field of an object/variable when an image is inserted on a new line after the previous image (defect 16806)
- fixed issue where the Cinegy Title template plays from the incorrect position when a different layout is selected (defect 16920)
- fixed issue where Bold/Italic formatting is not removed from a word when clicking the "Bold"/"Italic" button with the cursor positioned in front of the word (defect 17142)
- fixed issue that caused template playback to start from the incorrect position when a different layout was selected (defect 16920)
- fixed issue where the recently used lists of colors for the "Foreground" and "Background" parameters did not reset after deleting settings (defect 17088)
- fixed issue where text foreground/background color was not displayed correctly when the cursor was placed in front of a word, and the color was changed two or more times (defect 17140)
- fixed issue where the remove x button in the "Variables" tab was hidden when the variable list was long and included string/file variables alongside other types of variables (defect 17144)
- fixed issue preventing bold/italic formatting from being applied to a symbol within a range of symbols that were previously formatted (defect 17148)
- fixed error occurring when creating a new scene with the "Show All Objects" option previously selected (defect 17193)

Upgrade Notes

- Before the installation it is required to manually uninstall all Cinegy Titler components that you may have on your machine if the currently installed version is 21.2 or lower.

Important Known Issues

- The functionality of the "Run" option for plates is currently in the beta stage. Please be aware there may be issues with functionality in this release, previous functionality is unaffected.
- Colors in semi-transparent areas within the media file used in the Cinegy Title template are displayed incorrectly if the color specified in the "Source Matted With Color" parameter is not black. The issue occurs for the Straight and Premultiplied rendering modes when previewing secondary events (Cinegy CG preview in the "Load Template" window, Clip viewer preview) and Sequences (Cinegy Title template as a main item) output. We recommend generating media files with Premultiplied alpha using the black background and do not change the black color in the "Source Matted With Color" parameter in the Cinegy Title template.
- When opening a Cinegy Title template referencing a media file stored on a network share that is no longer accessible, the Cinegy Title Editor application may become unresponsive, and the "Media check" dialog is not displayed.
- Cancelling the eyedropper mode on the canvas may display an incorrect color in the "Selected Color" cell if a palette color was previously selected with the mouse.
- Cinegy Title Editor crashes after deleting a variable on the "Variables" tab if the variable is used multiple times in an object's text field as `${File}` (defect 17145).
